

Essential Understanding

Essential Understanding An inequality is a mathematical sentence that uses an inequality symbol to compare the values of two expressions. You can use a number line to visually represent the values that satisfy an inequality.

$<$ $>$ \leq \geq

Only 4 inequalities that would be used.

Example

#1 Writing Inequalities

What inequality represents the verbal expression?

A all real numbers x less than or equal to 7

x \leq 7

$$x \leq 7$$

B 6 less than a number k is greater than 13.

$k - 6$ $>$ 13

not equal

$$k - 6 > 13$$

Your Turn to Work it Out

1. What is an inequality that represents the verbal expression?

all real numbers p greater than or equal to 1.5

$$p \geq 1.5$$

$$p \geq 1.5$$

Example

#2 Identifying Solutions by Evaluating

A solution of an inequality is any number that makes the inequality true. The solutions of the inequality $x > 5$ are all real numbers x that are less than 5. You can evaluate an expression to determine whether a value is a solution of an inequality.

Is the number a solution of $2x + 1 > -3$?

A -3

$$\begin{aligned} 2x + 1 &> -3 \\ 2(-3) + 1 &> -3 \\ -6 + 1 &> -3 \\ -5 &\not> -3 \end{aligned}$$

-3 is not a solution to
 $2x + 1 > -3$

B -1

$$\begin{aligned} 2x + 1 &> -3 \\ 2(-1) + 1 &> -3 \\ -2 + 1 &> -3 \\ -1 &> -3 \end{aligned}$$

-1 is a solution for $2x + 1 > -3$

Your Turn to Work it Out

2. Consider the numbers $-1, 0, 1,$ and 3 . Which are solutions of $13 - 7y \leq 6$?

$$\begin{aligned}
 y &= -1 \\
 13 - 7y &\leq 6 \\
 13 - 7(-1) &\leq 6 \\
 13 + 7 &\leq 6 \\
 20 &\not\leq 6
 \end{aligned}$$

$$\begin{aligned}
 y &= 0 \\
 13 - 7y &\leq 6 \\
 13 - 7(0) &\leq 6 \\
 13 - 0 &\leq 6 \\
 13 &\not\leq 6
 \end{aligned}$$

$$\begin{aligned}
 y &= 1 \\
 13 - 7y &\leq 6 \\
 13 - 7(1) &\leq 6 \\
 13 - 7 &\leq 6 \\
 6 &\leq 6
 \end{aligned}$$

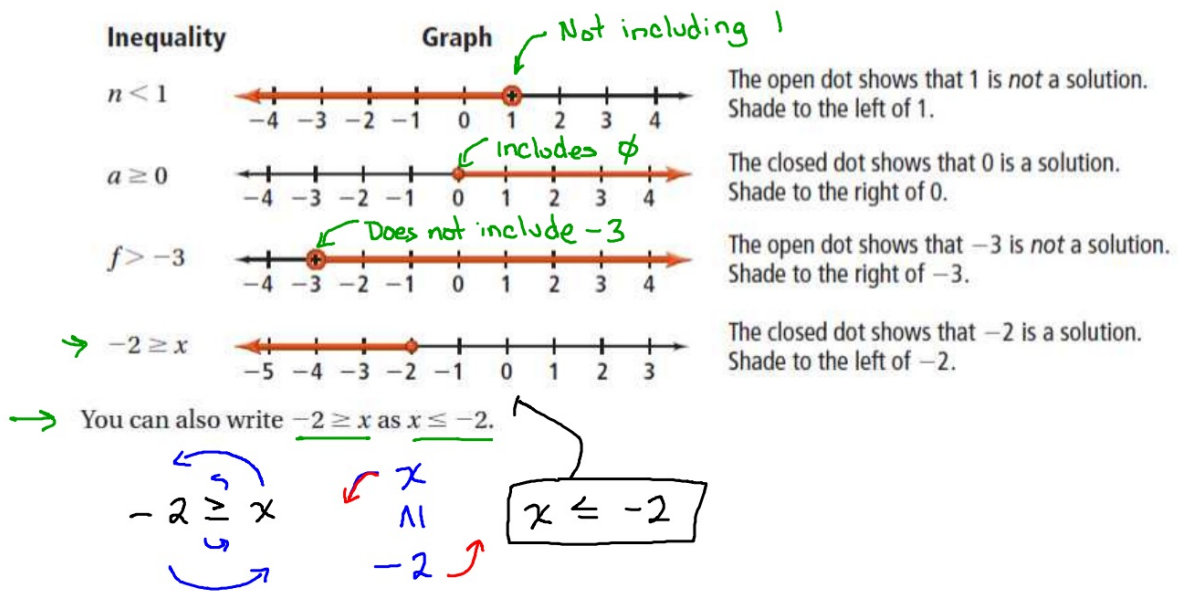

$$\begin{aligned}
 y &= 3 \\
 13 - 7y &\leq 6 \\
 13 - 7(3) &\leq 6 \\
 13 - 21 &\leq 6 \\
 -8 &\leq 6
 \end{aligned}$$

1 and 3 are the solutions to $13 - 7y \leq 6$

Concept Understanding

You can use a graph to indicate all of the solutions of an inequality.

Example

#3 Graphing an Inequality

What is the graph of $2 \geq a$?

$$2 \geq a$$

$$2 \geq a$$

$$a \leq 2$$

Your Turn to Work it Out

3. What is the graph of the inequality?

$$3 \leq n$$

$$3 \leq n$$

$$n \geq 3$$

$<$	$>$	\leq	\geq
\circ	\circ	\bullet	\bullet

Example

#4 Writing an Inequality From a Graph

What inequality represents the graph?

$$x \geq -1$$

$$x < 4$$

Your Turn to Work it Out

4. What inequality represents each graph?

$$x < -3$$

$$x \geq 0$$
